

ISO/IEC/IEEE Software and systems engineering - Software testing - ISO/IEC/IEEE 29119™ Series (Bundle)

This series of software testing standards is to define an internationally-agreed set of standards for software testing that can be used by any organization when performing any form of software testing. It introduces the concepts and vocabulary on which these standards are built, as well as providing examples of its application in practice. It also comprises test process descriptions that define the software testing processes at the organizational level, test management level and dynamic test levels and includes templates and examples of test documentation.

This standard supports test case design and execution during any phase or type of testing (e.g., unit, integration, system, acceptance, performance, usability, reliability). It also supports Keyword-Driven Testing.
