## **Section 1.** **Introduction to the** **National Electrical Safety Code®**

***Page 1:*** Update the first two paragraphs of Section 1 as follows:

The National Electrical Safety Code (NESC®) is American National Standard C2. It is a consensus standard that has been prepared by the National Electrical Safety Code Committee under IEEE's C2 procedures approved by the American National Standards Institute (ANSI) accreditation. The membership of the NESC Committee is composed of national and international organizations, and the committee is balanced in accordance with the balance provisions of the NESC Procedures and is certified by ANSI as having an appropriate balance of the interests of members of the public, utility workers, regulatory agencies, and the various types of private and public utilities.

The NESC is used in whole or in part by statute, regulation, or consent as the standard (or basis of the standard) of safe practice for public and private utilities in the United States, as well as various jurisdictions and industries in other countries.
