

Neuro Technologies for Brain-Machine Interfacing Industry Connections Activity Initiation Document (ICAID)

Version: 3.0 , 13 May 2021

IC17-007-03 Approved by the IESS SMDC 14 June 2021

Instructions

- Instructions on how to fill out this form are shown in red. It is recommended to leave the instructions in the final document and simply add the requested information where indicated.
- **Shaded Text** indicates a placeholder that should be replaced with information specific to this ICAID, and the shading removed.
- Completed forms, in Word format, or any questions should be sent to the IEEE Standards Association (IEEE SA) Industry Connections Committee (ICCom) Administrator at the following address: industryconnections@ieee.org.
- The version number above, along with the date, may be used by the submitter to distinguish successive updates of this document. A separate, unique Industry Connections (IC) Activity Number will be assigned when the document is submitted to the ICCom Administrator.

1. Contact

Provide the name and contact information of the primary contact person for this IC activity. Affiliation is any entity that provides the person financial or other substantive support, for which the person may feel an obligation. If necessary, a second/alternate contact person's information may also be provided.

Name: Ricardo Chavarriaga

Email Address: r_chavarriaga@ieee.org

Employer: ZHAW, Zurich University of Applied Sciences, Switzerland

Affiliation: Confederation of Laboratories for AI Research in Europe (IEEE)

Name: José Contreras-Vidal

Email Address: jlcontr2@Central.UH.EDU

Employer: University of Houston, USA

Affiliation: NSF IUCRC BRAIN Center

IEEE collects personal data on this form, which is made publicly available, to allow communication by materially interested parties and with Activity Oversight Committee and Activity officers who are responsible for IEEE work items.

2. Participation and Voting Model

Specify whether this activity will be entity-based (participants are entities, which may have multiple representatives, one-entity-one-vote), or individual-based (participants represent themselves, one-person-one-vote).

Individual-Based

3. Purpose

3.1 Motivation and Goal

Briefly explain the context and motivation for starting this IC activity, and the overall purpose or goal to be accomplished.

The field of Brain-Machine Interfacing (BMI)/Brain Computer Interface (BCI) is experiencing a transformative with more and more organizations interested in capitalizing the promises of these technologies through product development. Consistent support from public and private organizations is expected to continue and some organizations predict the field to experiment an exponential growth.

In the previous years, this IC-activity has identified several gaps in the standardization of these technologies and has been key in the creation of three new IEEE Standardizations projects addressing novel neuroimaging technologies, reporting of experiments with neural interfaces and specification of BMI systems. The findings of the IC-activity have also been influential in other related initiatives. A fact that is reflected by the participation of its members in efforts such as the preparation of the OECD recommendations for Responsible Innovation in Neurotechnology Enterprises, and the Working group on Data Sharing and Standards of the International Brain Initiative.

As it has been constantly pointed out in this activity, the lack of specific standards on neurotechnologies for BMI/BCI hinders the interoperability, and regulatory compliance of new devices and in consequence, consists a barrier for industrial applications to access a wide market. Moreover, the field of neurotechnologies is constantly evolving and development of standards should permanently follow this evolution. For this reason, we propose the renewal of this activity focusing on standardization areas that have been identified as key to the technology transfer process. Namely, the interoperability of the multiple modules that compose a BMI (including measuring and analysis of neural activity, and provision of feedback to the user through different means), and the coherent development of standards for both consumer and clinical BMI applications.

3.2 Related Work

Provide a brief comparison of this activity to existing, related efforts or standards of which you are aware (industry associations, consortia, standardization activities, etc.).

This IEEE IC-activity was one of the first initiatives directly focused on the study and development of voluntary consensus standards for BMI/BCI-related neurotechnology. Nonetheless, the awareness of the importance of this issue has been increasing thanks to efforts by this group and other stakeholders. Some relevant work include:

- OECD Recommendation on Responsible Innovation in Neurotechnology, Dec 2019 ([Link](#))
- FDA draft guidance “Implanted Brain-Computer Interface (BCI) Devices for Patients with Paralysis or Amputation - Non-clinical Testing and Clinical Considerations” ([Link](#)).
- International Brain Initiative Working Group: Data Sharing and Standards ([Link](#))
- EU-funded projects EUROBENCH ([Link](#)) and INBOTS ([Link](#)). Although not related explicitly to neurotechnologies, these projects focus on benchmarking of robotics, which is one of the complementary technologies for BCI.
- International Neuroinformatics Coordinating Facility, (INCF) in a non-profit organization that promotes community-supported standards and good practices in neuroinformatics ([Link](#))
- IEEE Brain Initiative and IEEE Neuroethics framework ([Link](#))

3.3 Previously Published Material

Provide a list of any known previously published material intended for inclusion in the proposed deliverables of this activity.

In the current period, the IC-activity produced the following material that will serve as sources for future deliverables:

- IEEE SA Standards Roadmap : Neurotechnologies for Brain-Machine Interfacing ([Link](#)). This document, released in Feb 2020 is the main deliverable of the IC-activity so far.
- Chavarriaga, Ricardo, 2020. *Standards for neurotechnologies and brain-machine interfacing*. IEEE Systems, Man, and Cybernetics Magazine. 6(3), pp.50-51. [doi:10.1109/MSMC.2020.2995438](https://doi.org/10.1109/MSMC.2020.2995438)

- OECD Recommendation on Responsible Innovation in Neurotechnology, Dec 2019 ([Link](#))
- FDA draft guidance "Implanted Brain-Computer Interface (BCI) Devices for Patients with Paralysis or Amputation - Non-clinical Testing and Clinical Considerations", Feb 2019 ([Link](#)).

3.4 Potential Markets Served

Indicate the main beneficiaries of this work, and what the potential impact might be.

BMI-related technologies are expected to have increasing impact in multiple markets including:

- Clinical markets
 - Motor rehabilitation
 - Assistive technologies, including neuroprosthetics, exo-skeletons, and communication devices
 - Diagnosis and therapies for motor and cognitive disorders
 - Health monitoring, in particular for healthy aging
- Non-clinical markets
 - Cognitive training in industrial and military applications
 - Exoskeleton control in industrial and military applications
 - Gaming
 - Cognitive monitoring: well-being support, cognitive training, sleep monitoring
 - Internet of Things and Domotics

3.5 How will the activity benefit the IEEE, society, or humanity?

BMI technologies can have a disruptive effect on how humans interact with intelligent machines. This potential brings great potentials but also inherent risks. Given the link between the brain and the cognitive capabilities and mental personhood the possibility of measuring and modulating neural activity requires technology development to follow responsible practices. Continuous evaluation and development of consensus standards in a global platform will empower the community to develop technology-based products that are fit for purpose while limiting the risks. This promotes faster development of new solutions and higher adoption of neurotechnologies.

IEEE is a world leader in providing guidance to researchers and innovators in ethically aligned design and robust technical standards. Renewal of this activity will help IEEE to continue being an important actor in the international dialog about emerging technologies both in the technical, organizational and societal levels.

4. Estimated Timeframe

Indicate approximately how long you expect this activity to operate to achieve its proposed results (e.g., time to completion of all deliverables).

Expected Completion Date: 06/2023

IC activities are chartered for two years at a time. Activities are eligible for extension upon request and review by ICom and the responsible committee of the IEEE SA Board of Governors. Should an extension be required, please notify the ICom Administrator prior to the two-year mark.

5. Proposed Deliverables

Outline the anticipated deliverables and output from this IC activity, such as documents (e.g., white papers, reports), proposals for standards, conferences and workshops, databases, computer code, etc., and indicate the expected timeframe for each.

The deliverables for this IC activity will be in nature similar to the previous period:

1. Provide an integrated overview of all standards activity that is specifically related to BMI-related neurotechnologies
2. Identify any gaps in the existing standards and a plan to address these gaps
3. Organize special sessions and workshops focused on the process of developing new standards for BMI.

These deliverables will provide an updated version of findings and recommendations included in the Standards Roadmap released in 2020 and organize special sessions and workshops focused on the process of developing new standards for BMI.

5.1 Open Source Software Development

Indicate whether this IC Activity will develop or incorporate open source software in the deliverables. All contributions of open source software for use in Industry Connections activities shall be accompanied by an approved IEEE Contributor License Agreement (CLA) appropriate for the open source license under which the Work Product will be made available. CLAs, once accepted, are irrevocable. Industry Connections Activities shall comply with the IEEE SA open source policies and procedures and use the IEEE SA open source platform for development of open source software. Information on IEEE SA Open can be found at <https://saopen.ieee.org/>.

Will the activity develop or incorporate open source software (either normatively or informatively) in the deliverables?: No

6. Funding Requirements

Outline any contracted services or other expenses that are currently anticipated, beyond the basic support services provided to all IC activities. Indicate how those funds are expected to be obtained (e.g., through participant fees, sponsorships, government or other grants, etc.). Activities needing substantial funding may require additional reviews and approvals beyond ICom.

Specify funding requirements and sources, if any.

7. Management and Procedures

7.1 Activity Oversight Committee

Indicate whether an IEEE Standards Committee or Standards Development Working Group has agreed to oversee this activity and its procedures.

Has an IEEE Standards Committee or Standards Development Working Group agreed to oversee this activity?:
Yes

If yes, indicate the IEEE committee's name and its chair's contact information.

IEEE Committee Name: IEEE EMBS Standards Committee

Chair's Name: Carole Carey

Chair's Email Address: c.carey@ieee.org

Additional IEEE committee information, if any. Please indicate if you are including a letter of support from the IEEE Committee that will oversee this activity.

IEEE collects personal data on this form, which is made publicly available, to allow communication by materially interested parties and with Activity Oversight Committee and Activity officers who are responsible for IEEE work items.

7.2 Activity Management

If no Activity Oversight Committee has been identified in 7.1 above, indicate how this activity will manage itself on a day-to-day basis (e.g., executive committee, officers, etc).

Briefly outline activity management structure.

7.3 Procedures

Indicate what documented procedures will be used to guide the operations of this activity; either (a) modified baseline *Industry Connections Activity Policies and Procedures*, (b) Standards Committee policies and procedures accepted by the IEEE SA Standards

Board, or (c) Working Group policies and procedures accepted by the Working Group's Standards Committee. If option (a) is chosen, then ICom review and approval of the P&P is required. If option (b) or (c) is chosen, then ICom approval of the use of the P&P is required.

EMBS standards working group procedures under the EMBS Standards Committee Sponsor procedures

8. Participants

8.1 Stakeholder Communities

Indicate the stakeholder communities (the types of companies or other entities, or the different groups of individuals) that are expected to be interested in this IC activity, and will be invited to participate.

Companies working in neurotechnologies including, but not limited neural acquisition systems (Neuroimaging, EEG, ECoG, and multiunit activity), electrostimulation at central (TMS, tDCS, tACS) and peripheral (FES) levels. Related technologies comprising virtual reality systems and gaming, haptic devices and rehabilitation robotics. Interested companies in healthcare and rehabilitation, gaming applications, and wellness, as well as regulatory and other government agencies (such as US FDA, NIH, NINDS) are strongly involved in these topics, and have shown their interest in the development of standards. In the renewed activity, we will engage with other governmental bodies outside US, and transnational organisations (fruitful connections with OECD have been established). In addition, we will also engage with other groups focused on ethical frameworks and standards, including the IEEE Brain Neuroethics Framework, INCF and the IBI Working Group on Data Sharing and Standards.

8.2 Expected Number of Participants

Indicate the approximate number of entities (if entity-based) or individuals (if individual-based) expected to be actively involved in this activity.

Approximately 100 individuals from research institutions, companies and regulatory agencies are expected to join the activity.

8.3 Initial Participants

Provide a number of the entities or individuals that will be participating from the outset. It is recommended there be at least three initial participants for an entity-based activity, or five initial participants (each with a different affiliation) for an individual-based activity.

Use the following table for an entity-based activity:

| Entity | Primary Contact | Additional Representatives |
|-------------|-----------------|----------------------------|
| Entity Name | Contact Name | Name |
| | | |

Use the following table for an individual-based activity:

| Individual | Employer | Affiliation |
|--------------------------|---|-------------|
| Akshay Sujatha Ravindran | University of Houston | |
| Al Emondi | DARPA | |
| Ander Ramos-Murguialday | TECNALIA | |
| Andrea Biasiucci | confinis AG | |
| Andreas Forsland | Cognixion | |
| Andrew Paek | University of Houston | |
| Aureli Soria-Frisch | Starlab Barcelona SLU | |
| Banu Onaral | Drexel University | |
| Bjorn-Erik Erlandson | KTH/Royal Institute of Technology | |
| Carole Carey | C3-Carey Consultants | |
| Christoph Guger | g.tec medical engineering GmbH | |
| Cris Micheli | Cognixion | |
| David Eguren | University of Houston | |
| David McMullen | NIH | |
| David Ojeda | Mensia Technologies | |
| Devjani Saha | FDA | |
| Dilranjan Wickramasuriya | University of Houston | |
| Doug Gischlar | IEEE | |
| Eduardo López-Larraz | University of Tübingen | |
| Emil Hewage | CBAS | |
| Emma Rahman | BIOS | |
| Esteban Pino | Universidad de Concepción | |
| Gangadhar Garipelli | MindMaze SA | |
| Hasan AL-Nashash | American University of Sharjah | |
| Hasan Ayaz | Drexel University | |
| Heather Dean | FDA | |
| Houde Dai | Haixi Institutes | |
| Ivan Volosyak | Rhine-Waal University of Applied Sciences | |
| Jesus Cruz-Garza | University of Houston | |
| Jiajun Chang | University of Houston | |
| Joel Libove | Furaxa | |

| | | |
|-------------------------|--|--|
| John Shambroom | Shambroom Associates | |
| Jose Contreras-Vidal | University of Houston | |
| Justin Brantley | University of Houston | |
| Kelliann Wachrathit | FDA | |
| Kevin Nathan | University of Houston | |
| Kunal Paralikar | Medtronic | |
| Lizbeth Peralta-Malvez | UDLAP | |
| Louis Mayaud | Mensia Technologies | |
| Luigi Bianchi | Tor Vergata University | |
| Matthew Fifer | APL | |
| Matt Raymond | NIH | |
| MD RAFIUL AMIN | University of Houston | |
| Md Rashed-AI-Mahfuz | University of Houston | |
| Michael Barros | TSSG/WIT | |
| Michael Smith | IEEE SMC | |
| Narisa Nan Chu | IEEE | |
| Nicholas Langhals | NIH | |
| Ricardo Chavarriaga | ZHAW-CLAIRE | |
| Sho Nakagome | University of Houston | |
| Sinkuen Hawkins | IEEE Brain | |
| Stephen Bush | GE | |
| Stuart Mason Dambrot | | |
| Sumit Soman | Centre for Development of Advanced Computing | |
| Tim Mullen | Intheon | |
| Wai-Chi Fang | National Chiao Tung University | |
| Walter Besio | University of Rhode Island/CREmedical | |
| Yinxu Wan | U. Calgary | |
| Yongtian He | University of Houston | |
| Yu Yuan | IEEE Digital Senses Initiative | |
| Zach McKinney | Scuola Superiore Sant'Anna | |
| | | |

8.4 Activity Supporter/Partner

Indicate whether an IEEE committee (including IEEE Societies and Technical Councils) has agreed to participate or support this activity. Support may include, but is not limited to, financial support, marketing support and other ways to help the Activity complete its deliverables.

Has an IEEE Committee agreed to support this activity?: No

If yes, indicate the IEEE committee’s name and its chair’s contact information.

IEEE Committee Name: Committee Name

Chair’s Name: Full Name

Chair’s Email Address: who@where

Please indicate if you are including a letter of support from the IEEE Committee.
